1. Introduction

1.1 Purpose of this document

This document describes the Maharshi Kanad Jyotish Kendra web platform: what it does, how it is built, how it is run and how it is kept safe. It is the main handover document. A separate manual, "Admin Panel Manual", explains day-to-day use for the Kendra's staff.

1.2 The project in one paragraph

The platform lets visitors learn about the Kendra's Vedic astrology services, see the day's Panchang, use free Kundli and Kundli-matching tools, book a service online, pay by UPI or bank transfer, upload their Kundli, and follow the progress of their order. The Kendra manages everything through a private Admin Panel without touching code. An associate (referral partner) programme lets partners earn commission on bookings they bring. The site works in Hindi (default) and English and is designed to work well on phones.

1.3 Who uses it

Role	What they can do
Visitor	Browse services, Panchang, tools, blog, gallery, certificates; contact the Kendra; chat with the assistant
User (customer)	Everything a visitor can, plus book and pay, upload files, track orders, download invoices
Associate	Share a referral link, see referrals and commission, request payouts
Super Admin	Full control of content, orders, payments, settings, associates, backups

2. Feature summary

2.1 Public website

- Home page with a one-line bar showing time, day, date, paksha, tithi, lunar month and Vikram Samvat (calculated daily by the site).
- Services and plans, service detail pages, Other services.
- Panchang, Kundli and Kundli-matching pages using AstroSage's free tools embedded in the page, each switchable on or off by the admin.
- Prashna Kundli request form.
- Offers page, certificates (GST, MSME, Trademark, ISO) with view, download and print.
- Blog (articles), gallery, reviews, FAQ, founder page, help, contact page with map and enquiry form.
- Social media links with icons (YouTube, WhatsApp, Facebook, Instagram, Twitter/X, LinkedIn, Telegram) controlled by the admin.
- Floating Call, WhatsApp, AI and Chat buttons (two on each side) that slide away while scrolling.
- AI-assisted chat widget with admin-managed answers.
- Mobile bottom bar (Home, Menu, Services, Booking, Offers, Account) and a menu sheet.
- Scrolling notice strip that visitors can pause and close.

2.2 Booking and payment

1. The customer chooses a service and plan and signs in.
2. Birth details are entered (and a partner's details for matching).
3. Plans that include a consultation call require a free appointment slot.
4. A promo code may be applied; the server checks minimum order, services, dates, usage limits and the customer's own usage.
5. The price is computed on the server (never trusted from the browser) with GST.
6. The customer pays by the Kendra's UPI, QR or bank details and submits the reference (and optional screenshot).
7. The admin verifies the payment, which creates the invoice; the admin then moves the order through its stages.
8. The customer tracks the order, receives files in their vault and downloads the invoice.

Online card or UPI payment through Razorpay is prepared on the server side but needs the Kendra's Razorpay account and keys before it can be switched on.

2.3 Customer account and vault

- Sign in by mobile OTP, email and password, or Google.
- A private vault where the customer uploads their Kundli (PDF, images, video, audio, Word, Excel, PowerPoint, text; up to 4 MB). A preview appears beside the upload button; Word and Excel files download.
- Orders list, invoice download, logout.

2.4 Associate programme

Registration with approval (or automatic approval), a personal referral link and QR, commission rules per service or plan, personal commission overrides, a commission life cycle (Pending, Earned, Paid, Cancelled), payout details and payout requests with a minimum amount.

2.5 Admin Panel

A grouped sidebar with: Dashboard; Orders, Services and plans, Other services, Appointment slots, Promo codes, Enquiries; Users, Associates, Customer files; Website settings (15 sections), Banners, Scrolling notice, Pages and legal, Articles, Gallery, Reviews, FAQ, Founder, Certificates, Translations, Chatbot; Business settings, API keys and Analytics, Backups. See the Admin Panel Manual.

3. Architecture

3.1 Overview

```
Visitor / Customer / Admin (browser, phone, Android WebView)
                |
       HTTPS  v
  +----------------------------+
  |  Next.js application       |   Pages (server rendered), API routes,
  |  (hosted on Vercel)        |   proxy for locale and route guards
  +--+----------+----------+---+
     |          |          |
     v          v          v
 PostgreSQL   Vercel Blob   Outside services
 (Prisma)     (uploads)     Razorpay, MSG91, SMTP, Google sign-in,
                            AstroSage embeds, Gemini AI, OpenStreetMap
```

3.2 Technology

Layer	Technology
Framework	Next.js 16 (App Router), React 19, TypeScript
Styling	Tailwind CSS 3 with a colour-token palette (saffron, maroon, yellow, red on cream)
Languages	next-intl (Hindi default, English) plus admin-editable translation overrides
Database	PostgreSQL through Prisma 5 (migrations in /prisma/migrations)
Sign-in	NextAuth 4 with JWT sessions: mobile OTP, email and password, Google
Validation	Zod schemas on every API input
File storage	Vercel Blob (private); local disk for development
PDF	pdfkit for invoices
Tests	Vitest (unit and API-level tests)
Hosting	Vercel (cron jobs configured in vercel.json)

3.3 Folder map

Folder	Contents
src/app/[locale]	Public and admin pages
src/app/api	API routes (auth, booking, payments, vault, admin, cron, health)
src/components	Shared interface parts (header, footer, menus, banners, viewers)
src/features	Feature modules (booking, admin screens, auth, contact, associates)
src/lib	Business logic (booking, offers, payments, associates, backups, Panchang, site settings, storage)
prisma	Database schema, migrations and seed
messages	Hindi and English text
docs	Documentation (this handbook, guides, legal drafts, client documents)
tests	Automated tests
android-app	Android WebView wrapper

3.4 Key design decisions

- Prices, discounts and GST are always computed on the server from database records.
- Money is stored in paise (integers) to avoid rounding errors.
- Orders reserve appointment slots and promo-code usage for 30 minutes; unpaid reservations are released automatically.
- Everything the Kendra may want to change lives in the database (Website settings, Pages, Banners and so on), not in code.
- The Panchang is calculated from the Sun's and Moon's positions (Lahiri ayanamsha, Varanasi), so it needs no outside service.

4. Data model

The database holds these main groups of records (Prisma models).

Group	Models
Accounts	User, Account, VerificationToken, OtpVerification, RateLimit
Catalogue	Service, Plan, OtherService, Offer
Orders and payments	Order, OrderStatusEvent, Slot, Counter, ProcessedWebhookEvent
Customer files	VaultFile
Associates	AssociateProfile, CommissionRule, Commission, PayoutRequest
Content	StaticPage, BlogPost, Banner, MarqueeItem, MediaGalleryItem, Testimonial, FaqItem, FounderProfile, Credential, TranslationOverride, ChatbotQA, ContactEnquiry
Settings	AdminSettings (business, payment, map, associate rules, backups), SiteConfig (website settings sections)
Operations	BackupRecord, PanchangCache

Migrations 0 to 10 are applied automatically at each deployment (the build runs "prisma migrate deploy").

5. Security

Area	How it is protected
Passwords	Stored only as bcrypt hashes
Sessions	Signed JWT cookies, HTTP-only, secure
Roles	Server-side checks on every admin, associate and customer API; admin pages re-check the role in the database
Cross-site requests	Origin check (CSRF protection) on every state-changing API
Brute force	Database-backed rate limits on login, OTP, coupon checks, uploads, tracking; admin lockout after repeated failures
Input	Zod validation on all input; links are limited to safe web addresses
Uploads	File type is verified from the file's actual content (not its name); executable, HTML and SVG files are refused; size limits; files are private and served only to the owner or admin with safe headers
Secrets	Third-party keys saved in the admin panel are encrypted at rest (AES-256-GCM) and never shown or exported; backups exclude secrets and password hashes
Payments	Amounts come from the server; webhooks are signature-checked and processed once
Headers	HSTS, no framing of the site, no content-type sniffing, strict referrer policy
Privacy	Customer files and details are visible only to the customer and the admin; the legal pages describe use of data
Backups	Automatic daily, weekly and monthly copies stored in the database; manual and downloadable copies

6. External services and configuration

6.1 Services

Service	Purpose	Account owner	Cost
Vercel	Hosting, cron jobs, file storage	Kendra	Free tier exists, but a paid plan is advised for a business
PostgreSQL (Prisma Postgres)	Database	Kendra	Free tier then paid
Razorpay	Online payments (optional until keys exist)	Kendra	Per-transaction fee
MSG91	OTP by SMS (needs DLT registration in India)	Kendra	Per SMS
Gmail or SMTP	Order emails	Kendra	Free with a Gmail App Password (limits apply)
Google Cloud	Sign in with Google	Kendra	Free
Google Analytics and Search Console	Visitor statistics and search presence	Kendra	Free
Gemini (Google AI)	Chat assistant answers	Kendra	Free tier with limits
AstroSage	Free Panchang, Kundli and Matching tools shown inside pages	AstroSage	Free (no key)
OpenStreetMap or Google Maps	Map	none or Kendra	Free

6.2 Environment variables

Set in the hosting dashboard. Values saved in the Admin Panel (API keys) take priority over these.

Variable	Purpose
DATABASE_URL	Database connection
NEXTAUTH_SECRET, NEXTAUTH_URL	Session signing key and the public address of the site
CREDENTIALS_ENCRYPTION_KEY	Key used to encrypt API keys saved in the admin panel
INITIAL_ADMIN_PASSWORD	Password for the first admin account
CRON_SECRET	Authorises the scheduled jobs
BLOB_READ_WRITE_TOKEN	File storage (set automatically by Vercel Blob)
GEMINI_API_KEY	AI chat
RAZORPAY_KEY_ID, RAZORPAY_KEY_SECRET, RAZORPAY_WEBHOOK_SECRET	Online payment
MSG91_AUTH_KEY (and sender and template)	OTP SMS
SMTP_HOST, SMTP_PORT, SMTP_USER, SMTP_PASS, SMTP_FROM	Email
GOOGLE_CLIENT_ID, GOOGLE_CLIENT_SECRET	Google sign-in
NEXT_PUBLIC_GA_MEASUREMENT_ID	Google Analytics (or set it in the admin panel)
DEMO_MODE	Developer switch for sample behaviour; keep it off for a fully live launch once SMS and storage are configured

> *Keys must never be placed in the code or sent in messages. Enter them in the hosting dashboard or in Admin, API keys and Analytics.*

7. Deployment and operations

7.1 How a release happens

1. Code is committed to the main branch of the repository.
2. Vercel builds automatically: it applies database migrations, then builds the site.
3. If the build succeeds, the new version goes live in a few minutes. If it fails, the old version stays online.

7.2 Scheduled jobs

Job	Time (UTC)	What it does
expire-orders	02:00 daily	Releases unpaid reservations (slots and promo uses)
backup	20:30 daily (02:00 India)	Creates a daily backup, plus weekly on Sundays and monthly on the 1st, and removes old copies

7.3 Health check

The address /api/health returns {"status":"ok"} when the site and database are working. It can be used with a free uptime monitor.

7.4 Backups and restore

- Content and records are copied to the database daily and can be downloaded as JSON from Admin, Backups.
- Uploaded files live in file storage and should be backed up separately if they are critical.
- Restore is performed by the developer from a chosen backup.
- The hosting database provider also keeps its own point-in-time backups according to its plan.

7.5 Monitoring and maintenance

- Check the Vercel dashboard for failed builds and errors.
- Review Google Analytics monthly.
- Update dependencies and apply security patches every quarter.
- Renew the domain yearly.

8. Quality assurance

- More than 540 automated tests cover pricing and GST, promo-code rules, booking and slots, payments and webhooks, order status rules, associates and commissions, uploads and file-type checks, backups, site settings, Panchang calculation and security checks.
- Every release is checked with the linter, the type checker and the full test suite.
- Key flows were exercised end to end on a production build: registration, sign-in, booking, payment proof, admin approval, status updates, tracking, invoice, vault upload, associates, backups and settings.

9. Known limitations and next steps

Item	Status	Needed to complete
Online payment (Razorpay)	Prepared, not yet switched on	Razorpay account, keys, and about one day to connect and test
Mobile OTP by SMS	Needs a provider	MSG91 account, DLT registration, keys
Uploads	Up to 4 MB per file (hosting limit)	A larger plan or direct-to-storage upload if bigger files are needed
Word and Excel preview	Downloaded, not previewed in the browser	Not planned
Free tools	Embedded from AstroSage and subject to their availability	Admin can change the address or switch the page off
Hindi legal pages	The approved texts are in English	Hindi translation after the lawyer approves
Native mobile app	A WebView app exists; a full React Native app is planned	See the App Development Plan

10. Handover checklist

Accounts and access:

- ☐ Domain bought in the Kendra's name and connected
- ☐ Hosting (Vercel) and database accounts in the Kendra's name
- ☐ Admin password changed from the initial one
- ☐ Razorpay, MSG91, Gmail App Password, Google keys, own Gemini key entered
- ☐ Google Analytics and Search Console set up

Content:

- ☐ Real address, phone, email, UPI, bank, GSTIN entered
- ☐ Logo, social links, certificates uploaded
- ☐ Legal pages approved by the lawyer and published
- ☐ Services, plans and appointment slots reviewed

Launch tests:

- ☐ A real booking and payment test (small amount)
- ☐ OTP login test on a real phone
- ☐ Invoice, tracking and email checks
- ☐ A backup downloaded and stored safely

11. Glossary

Term	Meaning
Panchang	The Hindu almanac: tithi, nakshatra, yoga, karana and timings
Tithi, Paksha	Lunar day and the bright (Shukla) or dark (Krishna) half of the month
Vikram Samvat	The Hindu calendar year count
Kundli, Janampatri	Birth chart
Prashna Kundli	Chart cast for the moment a question is asked
Vault	The customer's private file area
Slot	A bookable time for a consultation call
Associate	A referral partner who earns commission
UTR	The reference number of a bank or UPI payment
GST	Goods and Services Tax
Webhook	An automatic message from the payment provider confirming a payment
Migration	A versioned change to the database structure

12. Document set

Document	Use
Project Documentation (this document)	Overview, architecture, security, operations
Admin Panel Manual	Daily use of the Admin Panel
Free and Paid Services guide	What costs money and what is free
App Development Plan	Plan for the native mobile app
Legal drafts and client documents	Privacy, terms and related texts
